

Installation Instructions of CMMediator

1. Download the CMMediator installation file (either 64 or 32 bit)
2. Extract and install CMMediator. The installation file is saved as a rar archive format. If you don't have a rar extractor software – download it from [here](#). You don't need to buy it- it's a free software.
3. After installation, open the CMMediator folder under C:\ProgramFiles\EasyCmm\CMMediator and allocate the Globus.lix file
4. In case you don't find the Globus.lix file, go to "Tools" folder and run MacAdress.exe and then you will get Globus.lix file.
5. Send the Globus.lix file to info@easycmm.com . When sending the email, please add the following information:
 - What type of CMM you would like to connect to
 - What type of CMM software you would like to use to drive that CMM
6. We will send you back a license for 30 days, free of charge
